KERN SET-14 EasyTouch Individual Print

EasyTouch

NEW

Individual positioning of print elements

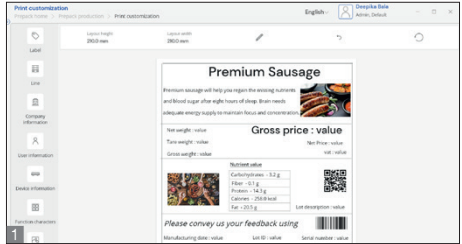

Individual paper sizes

## ET Individual Print – Function to tailor print formats to an individual user

Features

- Note: the required basis is **SET-01 ET OS** (basic package)

- **1 Individual positioning of print elements**: With KERN EasyTouch Print you can design your printout individually and completely as you wish. You have the option of printing specific dynamic values in specific positions on the paper in your own existing forms, such as e.g. weight, quantity, price, or user with date and time

- **2 Individual paper sizes:** For adhesive labels or individual paper sheet sizes, the page size can be set up as you wish, including a definable auto-feed from label to label

- The ET Individual **Print barcode function** permits the printing of each print element (e.g. item number, net weight, quantity result) as a barcode. The barcode elements can also be positioned freely in the print area and the size can be determined as you wish. There are different barcode types to choose from **6**
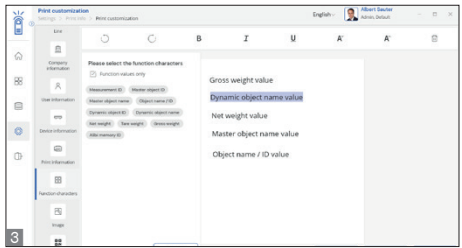

- **3 Individual selection and formatting** You can select as many print elements from the data fields available in your EasyTouch function – the same elements can be used several times. Each print element can be freely formatted, with bold, italics, underline and the font size you want

- **4** Individual user and function settings: The Admin is free to determine which **print format** should be used for which user groups and for which EasyTouch function

- **5 Company information**: All company details can be selected, e.g. website, logos, etc.

- **Individual graphics and images** function: Your own images, logos or icons can be part of each printout. These graphic elements can be freely positioned and you can select the size you wish

- **Printer:** Zebra ZD421 approved by KERN. Please contact KERN support for all other printer models
